

Auberge à vendre dans Coin, Málaga

29.000€

Versatile, comfortable and beautiful modular homes starting at 29.000,00€

The house is made up of modular units of 30 m², with a length of 12.00 m, a width of 2.50 m and a height of 2.60 m. The structure is metallic with 15cm insulating foam padding and a wide variety of high-quality coatings that make it visually pleasing and keep the temperature inside constant.

The interior layout of a basic module has enough space for a bathroom with a shower, living and dining areas with an integrated kitchen, and a bedroom. But the design can be extended at the customer's will by attaching modules both horizontally and vertically.

There is no need to build a foundation or a concrete base pad. The house can rest level and safe on wooden or prefabricated concrete blocks.

The construction of the house is carried out in the factory, to later be transported by truck to the land and placed on it by crane. On-site installation is done in a maximum of 48 hours. The same manufacturer will be in charge of the transport and installation.

There is a wide variety of coatings, finishes and flooring available to the client to make their home a unique and personalized space.

The electrical installation contemplates the possibility of placing solar panels. And you can request the installation of air conditioning, kitchen (both furniture and appliances) and bathroom fixtures to receive your home turnkey.
